Elmed's, Validated Clear Flush® instruments have a patented internal design that facilitates removal of virtually all infectious bio-burden from "inside" the instrument with a simple 50cc flush and provides you with 100% bacteria kill on every cycle.

Specify Clear Flush® and reduce your patients' risk of a dangerous surgical infection caused by a dirty laparoscopic instrument.

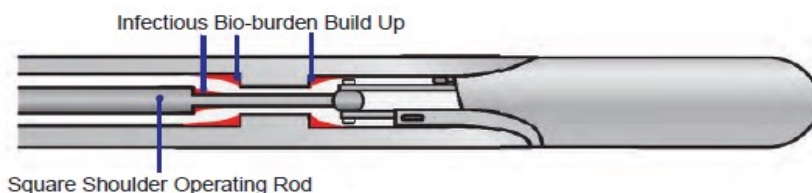

Now you can have the confidence of "disposable" instruments without the headaches and time consuming problems of "modular" instruments

Clear Flush® is Clean on the *Inside*, Every Time.

U.S. Patent #6, 554, 828

Conventional Laparoscopic Instruments

** Validated by Independent Laboratory Testing, copies of test data on file and available.*

Elmed's Validated* Clear Flush® Laparoscopic Instruments

With over **25** different types of handles to choose from and over **140+** jaw patterns to pick from, you can now have a '*validated, custom made*' laparoscopic instrument instead of a conventional, non-validated '*off the shelf*' instrument

- Patented and validated* to be 100% clean & sterile for every patient, every time
- Reduce patient risk of an infection caused by a contaminated instrument
- No time-consuming disassembly required for cleaning; just a simple flush
- Have the confidence of a clean, sterile, moisture-free instrument every time*
- Handcrafted in America with the finest surgical grade steel

ARE YOUR LAP INSTRUMENTS AS CLEAN ON THE INSIDE AS THEY ARE ON THE OUTSIDE?

Problem: How to Quickly and Easily Comply with The Joint Commission's Mandate to Pre-Clean Instruments at Point of Use Prior to Transport.

Solution: Elmed's patented, validated* *Clear Flush*® flushable laparoscopic instruments!

TJC is now citing facilities that do not begin pre-cleaning surgical instruments at the point of use. Not only is a lack of pre-cleaning a potential citation issue with TJC, more importantly, it is an issue for patient in your facility.

Elmed's validated* *Clear Flush*® technology will help you quickly and easily comply with TJC's pre-cleaning requirement at the point of use *without* the time-consuming headaches and hassles caused by modular instruments. More importantly, you can now have the validated* assurance of clean, sterile, moisture-free laparoscopic instruments for your every patient, every time!

With Clear Flush® laparoscopic instruments from Elmed, you get instruments that:

- *Have been validated* to be clean, sterile and moisture-free for every patient*
- *Have been validated* to remove bioburden and biofilm with a simple flush*
- *Are designed for increased steam penetration to allow 100% bacteria kill*
- *Have a patented internal lubrication channel for smoother performance*
- *Are insulated with Polymed CW® to protect patients from electrical burns*

POLYMED* Insulation on Clear Flush® Laparoscopic Instruments

POLYMED® Insulation on Clear Flush® Laparoscopic Instruments

POLYMED® helps reduce the risk of patient burns and surgical infections caused by the failure of conventional 'shrink-tube' (e.g., nylon, kynar) insulation used on most brands of laparoscopic instruments.

POLYMED's superior resistance to shrinkage, impact strength, lightweight and excellent insulating properties make it the product of choice for use on ELMED Clear Flush® instruments.

During the ELMED Clear Flush® manufacturing process POLYMED® is custom cut to the length of each individual instrument, threaded at the distal end and then bonded to the laparoscopic instrument. When conventional insulation shrinks and pulls back from the distal end of an instrument, bioburden can collect under the damaged insulation and become the source of a dangerous surgical infection.

According to its manufacturer, POLYMED® is:

1. An excellent material to use with electro-surgical instruments due to its exceptional insulating properties. The failure of conventional insulation on laparoscopic instruments is the number one cause of painful, dangerous and costly patient burns incurred during a laparoscopic procedure.
2. Able to withstand the stress and high temperatures of repeated cycles in a steam autoclave with no loss of dimensional stability. Conventional insulations can shrink and pull back from the distal end of the instrument after repeated steam sterilization cycles, greatly increasing the risk of a patient burn or infection.
3. A high temperature, lightweight, polyphenylsulfone material with outstanding impact resistance. Over time, conventional insulation can become brittle, crack and break from routine use and reprocessing, which can significantly increase the probability of a patient burn and/or a surgical infection.
4. Highly resistant to hydrolysis when exposed to hot water or steam. Hydrolysis is the chemical reaction that can cause a breakdown of the polymers used in conventional insulations, resulting in 'pinholes' in the insulation. These pinholes increase the potential of a dangerous surgical infection or serious patient burn.

Additional Properties of POLYMED®:

- High strength up to 410°F
- Resists common acids, bases and enzymatic washing solutions
- FDA- and NSF-compliant.
