ROTH URETHRAL SUTURE GUIDES

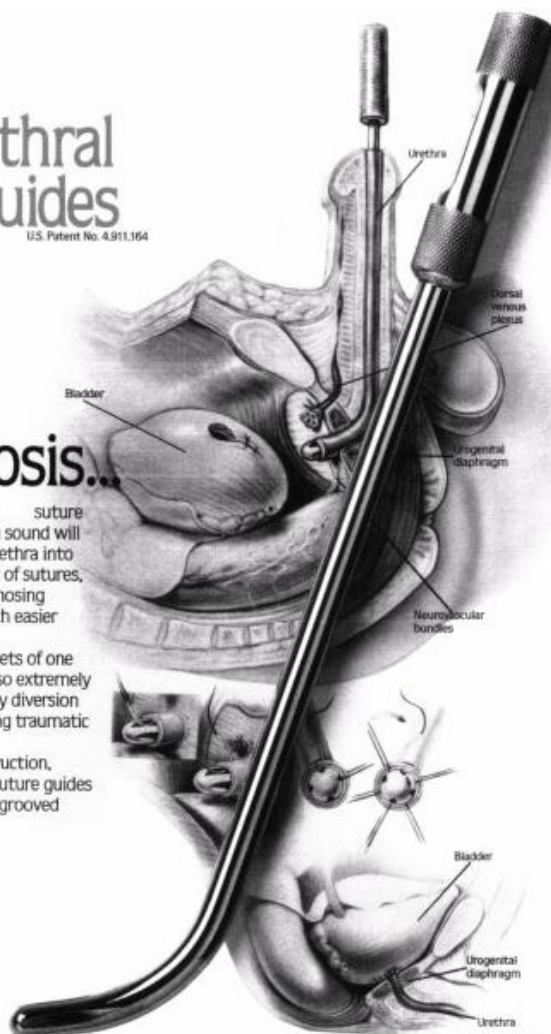

Roth Urethral Suture Guides greatly simplify urethral anastomosis...

U.S. Patent No. 4,911,164

Simply inserting Greenwald's suture guide (in the 28FR size) like a sound will usually force enough of the urethra into the cavity to allow placement of sutures, making the task of reanastomosing urethra and bladder neck much easier after radical prostatectomy.

These guides (available as sets of one each, 24FR and 28FR)* are also extremely useful for internal male urinary diversion and for urethral repair following traumatic injury.

100% stainless steel construction, mirror finished. Greenwald's suture guides provide precision spaced 90° grooved guides for suture needles.
